

BEAR**TRADER**

HEAT SEEKER

We have now added a Heat Alarm to our popular Bear smoke alarm offer. The Bear BEHEATV2 is a Class A2 alarm that is ideal for locations where a conventional smoke detector is likely to cause a nuisance alarm.

The BEHEATV2 alarms when the room temperature reaches a fixed threshold of 54°C to 70°C. It is ideal for kitchens, laundries and garages and areas affected by dust or steam.

The BEHEATV2 can be interconnected with up to a maximum 24 alarms. It can also be wired interlinked with our traditional Bear BESMOKEYV2 Smoke Alarm on a network.

When the heat is on, bring on a Bear Heat Alarm.
